

CONNECTION OF ALLERGIC RHINITIS AND BRONCHIAL ASTHMA. ROLE OF SPECIFIC IMMUNOTHERAPY IN COMPLEX MEDICAL TREATMENT

ROMANIUK L. I.

Summaty

The data, confirming genetic, immunological, pathophysiological, clinical connections of allergic rhinitis and bronchial asthma, are presented. Importance of the combined therapy of upper and lower airways, in which the special role is given to specific immunoterapii, is underlined. The dynamics of immunological and clinical changes in patients with pollinosis and bronchial reactivity were studied during treatment by different methods of SIT. By our results combined SIT+SLIT is the most effective method of treatment of this category of patients.
