

NEW POSSIBILITIES IN THE TREATMENT OF ALLERGIC RHINITIS

*T.V. Bezditko, S.L. Polschikova, A.V. Shmidt,
O.N. Khokhuda, G.V. Eremenko*

Summary. *Allergy rhinitis (AR) is one of the most widespread diseases of man. The doctors of allergology department of the Kharkov Regional Clinical Hospital actively participated in the allergy of screening. 17000 questionnaires were filled and analyzed. As a result of the this work positive reaction for the habitants on pollens of plant, domestic dust were found. This allowed to prescribe SET on the early stages of disease development and to prevent development of allergypathologi. Those patients who were not prescribed SET, we provided standard medical treatment. Avamis (fluticasone furoate) was given to patients who were not prescribed SET. This medicine had a positive influence on the symptoms of allergy rhinitis and conjunctivitis.*

Key words: *allergy rhinitis, allergens, fluticasone furoate, Avamis.*
