**Abstract.** *The aim* of the article The aim of the article is to spread the experience of diagnosis and treatment of rare lung lesions (scarring-membranous lesions of the bronchi) in a child with Crohn's disease among clinicians of various specialties. The history of the development of the disease, the condition of the child upon admission to the hospital, approaches to diagnosing the causes, form and severity of intestinal and pulmonary disorders are given. The clinical picture of severe obstructive respiratory failure mimicked an attack of bronchial asthma, which complicated the diagnosis. Stages of treatment are analyzed, recommendations are provided. The article has extensive illustrative material.

**Key words:** Crohn's disease, broncho-lung lesions, children, diagnosis and treatment.
