

TREATMENT OF TUBERCULOSIS IN PATIENTS WITH ANTI-SOCIAL BEHAVIOR

A. V. Kalabukha, V. A. Kalabukha, O. F. Skvortsova

Summary

The therapeutic options and the results of treatment of tuberculosis patients with anti-social behavior have been summarized in current report. The population of tuberculosis patients with anti-social behavior forms a reservoir of tuberculosis infection. In average 70 % of these patients do not comply with even main course of chemotherapy. Several solutions of this complicated problem have been presented in the article.
